

Market Breadth

Overview

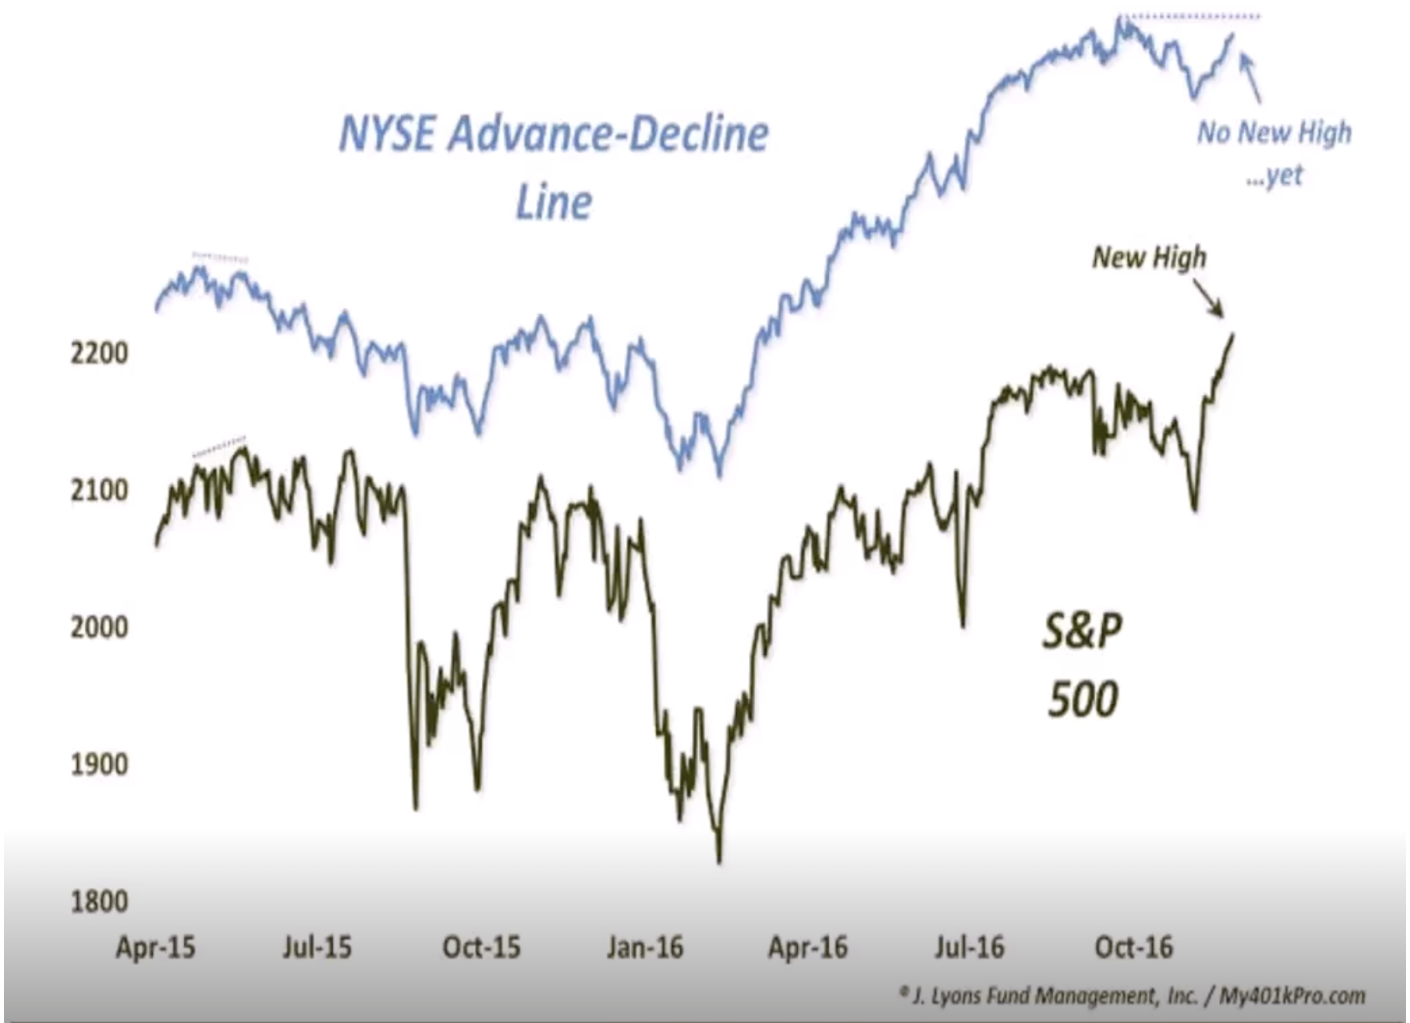

- Find **potential** highs or lows in the general market
- Divergence is a key way to spot market turns early and act as an **early warning sign**

Another simple way to check market breadth is checking sectors or large - mid - small caps (like btc against others)

AD line

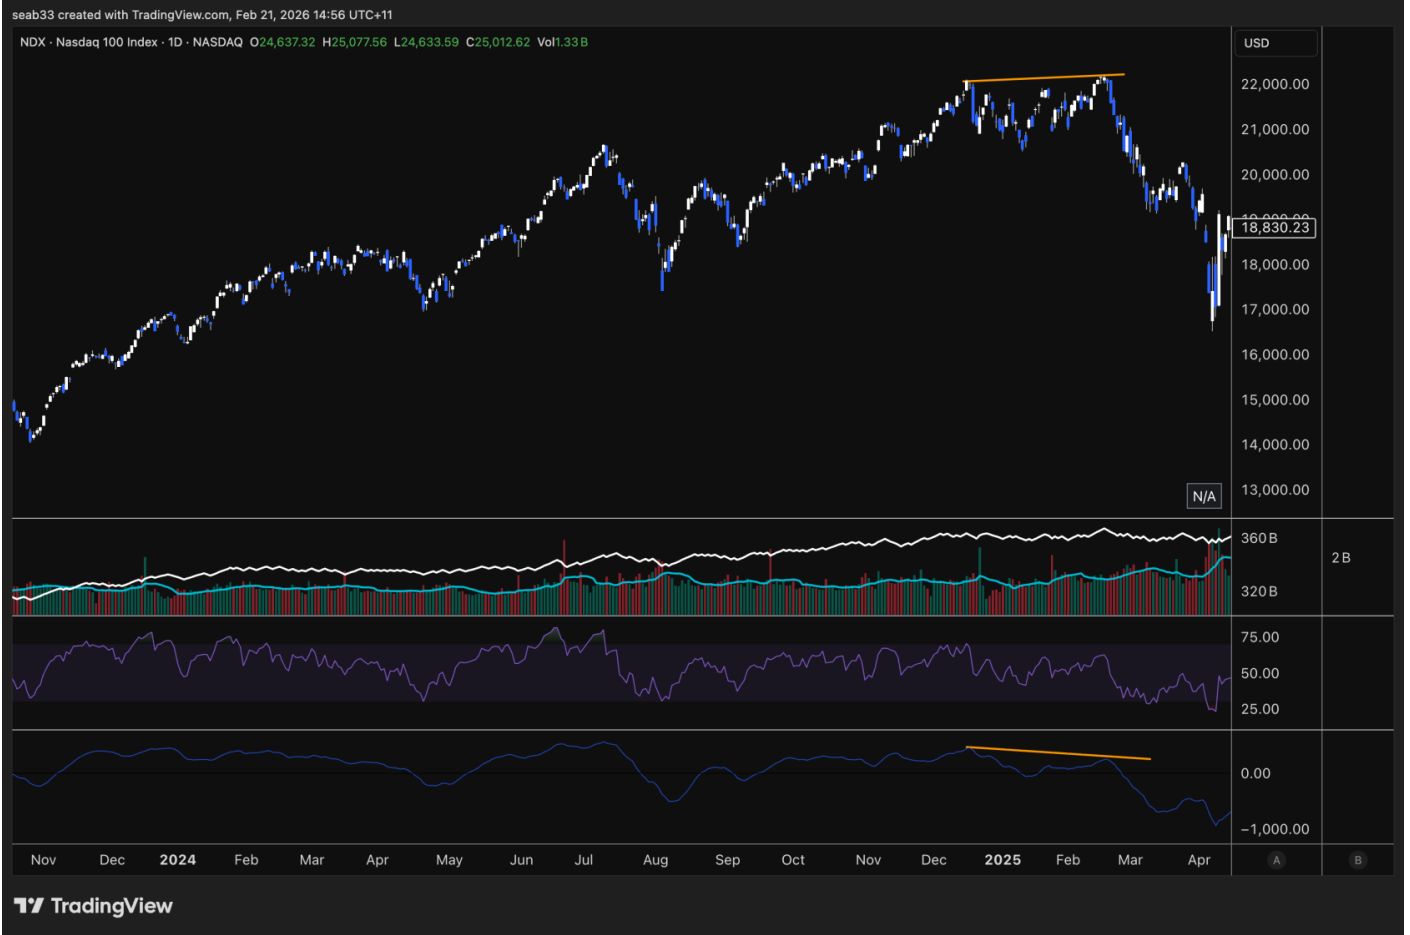

- A line that is calculated by taking the difference between the number of advancing
- Can be used as a point of divergence, AD line may not have made a new high but price may have, signalling potential weakness
- Can be used like regular bearish / bullish divergence

NYSE Advance-Dcline Line: No New High...yet

Above / Below EMA Oscillator (ABO)

The ABO indicator is great to see if there is another point of divergence
