

SQL Reference

Create a table that auto deletes on other table deletion

```
CREATE TABLE tradie_postcode_covered (  
  tradie_id INT,  
  postcode VARCHAR(10),  
  PRIMARY KEY (tradie_id, postcode), -- primary key ensures no tradie can be in the same postcode twice  
  FOREIGN KEY (tradie_id) REFERENCES tradies(id) ON DELETE CASCADE  
);
```
